

# COMPUTER INFORMATION TECHNOLOGY: COMPUTER NETWORKING

*"During the course of my studies at SUNY Orange, I obtained an education that far exceeded my expectations. The professors were always available before or after classes for any questions I had, and a major contributor to my career was the internship that was provided by the College."*

*Daniel A. Cosh*

## Why Computer Networking?

All organizations today rely on computer and information technology to conduct business and operate more efficiently. Often, however, these institutions do not have the internal resources to effectively implement new technologies or satisfy their changing needs. When faced with these limitations, organizations turn to the computer systems design and related services industry to meet their specialized needs on a contract or customer basis. Firms may enlist the services of companies in the computer systems design and related services industry for help with a particular project or problem, such as setting up a secure web site or establishing a marketplace online.

## Why Computer Networking at SUNY Orange?

The College's computer information technology (CIT) networking degree program prepares graduates to succeed in a variety of entry-level careers in computer networking and information technology occupations. An internship component is blended with coursework that concentrates on the latest emerging technological equipment and software. An experienced faculty brings the real world into the classroom to provide SUNY Orange students with a well-rounded education. A SUNY Orange networking degree is designed to prepare students to enter the workforce upon graduation.
